Academic Tutor

November 2023 - November 2023 (1 month)

Jakarta Barat, Jakarta Raya, Indonesia

As one of the selected representatives of my organization, I was assigned to introduce and teach the fundamental concepts of data science to students at Tarsisius 2 Middle School over a five-day program. The subjects covered topics such as an introduction to data science, basic Python programming, methods for data processing, data transformation, data cleaning, and data visualization skills. This structured approach ensured that students gained a solid foundation in essential data science concepts and their practical applications.

Education

BINUS University

Undergraduate Student, Data Science · (September 2022 - September 2026)

國立政治大學

Exchange student, Data Science · (February 2025 - June 2025)
